

**NATIONAL TRANSPORTATION SAFETY BOARD**  
**Office of Aviation Safety**  
**Washington D.C. 20594**

Meteorological Factual Report  
DCA01MM022

**A. ACCIDENT**

Location: About 16.2 Nautical Miles South-Southeast of Honolulu, Hawaii.  
Date: February 9, 2001  
Time: 2330 UTC  
Vessel: Collision of the Submarine, USS Greenville, and the Japanese Fisheries Training Vessel, EHIME MARU

**B. WEATHER GROUP**

A Weather Group was not established.

**C. DETAILS OF INVESTIGATION**

Note: All times are stated as Coordinated Universal Time (UTC) based on the 24-hour clock unless otherwise noted. All heights above mean sea level (MSL) unless noted. Heights in surface weather observations above ground level (AGL). All directions with reference to true north unless noted. Z = UTC. Hawaii Standard Time (HST) = Z minus 10 hours.

McIDAS - Man computer Interactive Data Access System. McIDAS is an interactive meteorological analysis and data management computer system. McIDAS is administered by personnel at the Space Science and Engineering Center at the University of Wisconsin at Madison. Data are accessed and reviewed on a Hewlett Packard 9000/C110 Workstation running McIDAS-X software.

Note: Accident site is located at 21:05:30 (degrees : minutes : seconds) north latitude and 157:49:06 west longitude.

**Surface Weather Observations**

Honolulu, Hawaii (PHNL)  
February 9, 2001

2253Z ... Winds 050 degrees at 7 knots; wind direction 020 degrees variable 080 degrees; visibility 10 miles; few clouds at 2,800 feet ( 0 to 2/8 cloud coverage), ceiling 4,500 feet broken (5/8 to 7/8 cloud coverage); temperature 27 degrees C; dew point 21 degrees C; rain showers vicinity all quadrants.

2353Z ... Winds 070 degrees at 12 knots; visibility 10 miles; few clouds at 2,500 feet (0 to 2/8 cloud coverage), ceiling 7,500 feet broken (5/8 to 7/8 cloud coverage); temperature 27 degrees C; dew point 20 degrees C; rain showers vicinity northeast.

PHNL is located about 16.2 nautical miles north-northwest of the accident site.

Attachments 1 and 2 ... PHNL Surface Weather Observations forms.

**Data from the Naval Research Laboratory (NRL), Monterey, California**  
(<http://www.nrlmry.navy.mil/>)

**NRL Monterey Scatterometer Winds\*\***

February 9, 2001, 1856Z ... Data plot showing winds easterly at 15 to 20 knots offshore Oahu.

February 10, 2001, 1746Z ... Data plot showing winds easterly at 10 to 15 knots offshore Oahu.

Attachments 3 and 4 ... Plot of scatterometer wind data.

\*\*The European Remote Sensing Satellite (ERS-1) carries an active microwave scatterometer with the capability to retrieve surface wind vectors (both direction and speed) over a 500 kilometers swath. The products displayed on the NRL web site are provided via cooperative work with **Dr Paul Chang NOAA/NESDIS** and aimed at researchers interested in the western Pacific and Indian Ocean basins. Plots covering both basins are updated four (4) times per day and contain the latest 18 hours of scatterometer winds available. Wind vectors are plotted in the normal meteorological wind barb notation and have also been color coded according to the color wedge in the upper right hand corner to quickly aid the viewer's search for high wind domains. The color table has been purposely broken up into numerous 5 and 10 knot regimes, so the viewer can rapidly identify regions experiencing winds within a certain wind speed range (e.g., winds between 20-25 knots).

### NRL Monterey SSM/I Composite2 Images\*\*\*

February 9, 2001, 1905Z ... Data showing wind speeds 15 to 20 knots offshore Oahu.  
February 10, 2001, 0359Z ... Data showing wind speeds 15 to 20 knots offshore Oahu.

Attachments 5 and 6 ... SSM/I Composite2 Images.

\*\*\*These composites show surface wind speed and integrated water vapor from the Special Sensor Microwave Imager (SSM/I) aboard the Defense Meteorological Satellite Program (DMSP) satellites. Also shown are images from the geostationary satellites that cover the same area. Depending on the area, geostationary images from the U.S. GOES, the Japanese GMS, or the European Meteosat satellites are shown. The surface wind speed (no direction) is derived from the ocean surface roughness that is sensed by the SSM/I. It is not valid for land, coastlines (within about 25 nautical miles of the coastline), or areas of precipitation (blacked-out on images). The integrated water vapor shows the vapor content from the surface of the ocean to the top of the atmosphere. It does not give moisture at a specific level. POC: Jeff Hawkins, Tom Lee.

### Weather Radar Data

Doppler weather radar data were obtained for the Molokai WSR-88D radar (PHMO). Images of Base Reflectivity and Base Velocity were provided by the National Weather Service. The accident site is located about 265 degrees at 67 kilometers (36.2 nautical miles) from the PHMO antenna. The elevation of the PHMO antenna is 1,429 feet. At the accident site the beam width and beam center are 3,647 feet and 4,217 feet, respectively.

Attachments 7 - 12 ... Base Reflectivity Images at 0.5 degree elevation angle; times 2317Z, 2322Z, 2327Z, 2332Z, 2337Z, and 2342Z; reflectivity in dBZ\*\*; see color bar in Attachment 12A for dBZ values.

The images show no weather radar echoes within about an 8 kilometers (4.3 nautical miles) radius of the accident site.

### \*\*VIP/DBZ Conversion Table

NWS VIP ... National Weather Service Video Integrator and Processor Level.  
WSR-88D LVL ... WSR-88D Doppler Weather Radar Level.  
PREC MODE dBZ ... Precipitation Mode dBZ.  
RAINFALL .. Rainfall in inches per hour.

NWS VIP	WSR-88D LVL	PREC MODE DBZ	RAINFALL
0	0	<5	
	1	5 to 9	
	2	10 to 14	
1 Very Light	3	15 to 19	.01 in/hr
	4	20 to 24	.02 in/hr
	5	25 to 29	.04 in/hr
2 Light to Moderate	6	30 to 34	.09 in/hr
	7	35 to 39	.21 in/hr
3 Strong	8	40 to 44	.48 in/hr
4 Very Strong	9	45 to 49	1.10 in/hr
5 Intense	10	50 to 54	2.49 in/hr
6 Extreme	11	55 to 59	>5.67 in/hr
	12	60 to 64	
	13	65 to 69	
	14	70 to 74	
	15	GTE 75	

Attachments 13 - 18 ... Base Velocity Images at 0.5 degree elevation angle; times 2317Z, 2322Z, 2327Z, 2332Z, 2337Z, and 2342Z; radial velocity (plus away from the radar and minus towards the radar) in knots; see color bar in Attachment 18A for values of radial velocity.

### **Satellite Data ( Terra MODIS and GOES)**

**\*\*MODIS data were reviewed using McIDAS.**

Attachments 19 and 20 ... MODIS images for 2105Z; 250 meters resolution; band = 1 and 2. Images show convection northwest of the accident site and clouds in the area of the accident.

**\*\*MODIS (or Moderate Resolution Imaging Spectroradiometer) is the key instrument aboard the Terra (EOS AM-1) satellite. Terra MODIS is viewing the entire Earth's surface every 1 to 2 days, acquiring data in 36 spectral bands, or groups of wavelengths (see MODIS Technical Specifications). These data, along with data from a second MODIS (which is being developed for the Aqua satellite), will improve our understanding of global dynamics and processes occurring on the land, in the oceans, and in the lower atmosphere. MODIS is playing a vital role in the development of validated, global, interactive Earth**

system models able to predict global change accurately enough to assist policy makers in making sound decisions concerning the protection of our environment.  
(<http://ftpwww.gsfc.nasa.gov/MODIS/MODIS.html>).

Geostationary Operational Environmental Satellite (GOES) 10 data were reviewed using McIDAS.

Attachment 21 .... GOES visible images (3 panel) for 2315Z, 2330Z, and 2345Z; 1 kilometer resolution; accident site noted by red box (*Acc Site*).

The images show clouds in the area of the accident site.

Attachment 22 .... GOES Channel 4 infrared images (3 panel) for 2315Z, 2330Z, and 2345Z; 1 kilometer (blow up) resolution; accident site noted by yellow box (*Acc Site*).

The images show high clouds (above 20,000 feet) in the area of the accident.

### **Astronomical Data**

For accident site and a time of 2330Z on February 9, 2001..

Altitude of the sun ... 52.8 degrees.

Bearing to sun ... 198.0 degrees.

### **Pertinent National Weather Service Forecasts**

Coastal Waters Forecasts Issued by the National Weather Service Forecast Office in  
Honolulu, Hawaii

#### **Issued 2200Z Thursday 2/8/2001 (1200 HST Thursday 2/8/2001)**

Caution is advised for all Hawaiian waters due to strong and gusty winds associated with isolated thunderstorms.

This afternoon ... Variable winds 10 knots seas 2 feet. Winds southeast over waters exposed to the southeast. Scattered showers and isolated thundershowers. Northwest swell near 5 feet slowly decreasing.

Tonight ... Variable winds 10 knots seas 2 feet. Scattered showers and isolated thundershowers.

Friday ... Southeast winds 10 knots seas 2 feet around Kauai and Oahu. A few showers. Isolated heavy showers.

Channels between the islands..

This afternoon ... Variable winds 15 knots seas 4 feet.

Tonight thru Friday ... Variable winds 15 knots seas 4 feet.

**Issued 0200Z Friday 2/9/2001 (1600 HST Thursday 2/8/2001)**

Caution is advised for all Hawaiian waters due to strong and gusty winds associated with isolated thunderstorms.

This afternoon ... Variable winds 10 knots seas 2 feet. Winds southeast over waters exposed to the southeast. Scattered showers and isolated thundershowers.

Tonight ... Variable winds 10 knots seas 2 feet. Scattered showers and isolated thundershowers.

Friday ... Southeast winds 10 knots seas 2 feet around Kauai and Oahu. A few showers. Isolated heavy showers.

Channels between the islands..

This afternoon ... Variable winds 15 knots seas 4 feet.

Tonight thru Friday ... Variable winds 15 knots seas 4 feet.

**Issued 0400Z Friday 2/9/2001 (1800 HST Thursday 2/8/2001)**

Caution is advised for all Hawaiian waters due to strong and gusty winds associated with isolated thunderstorms.

Tonight ... Variable winds 10 knots seas 2 feet. Scattered showers and isolated thundershowers.

Friday thru Saturday ... Southeast winds 10 knots seas 2 feet. Scattered showers and isolated thundershowers.

Channels between the islands..

Tonight ... Variable winds 15 knots seas 4 feet.

Friday thru Saturday ... East winds 15 knots seas 4 feet.

**Issued 1000Z Friday 2/9/2001 (0000 HST Friday 2/9/2001)**

Caution is advised for all Hawaiian waters due to strong and gusty winds associated with isolated thunderstorms.

Today ... Southeast winds 10 knots seas 2 feet. Scattered showers and isolated thundershowers.

Channels between the islands..

Today ... east winds 15 knots seas 4 feet.

**Issued 1600Z Friday 2/9/2001 (0600 HST Friday 2/9/2001)**

Caution is advised for waters around Kauai and Oahu due to strong and gusty winds associated with isolated thunderstorms.

Today ... Southeast winds 10 knots seas 2 feet. Scattered showers and isolated thundershowers.

Friday thru Saturday ... Southeast winds 10 knots seas 2 feet. Scattered showers and thundershowers.

Channels between the islands..

Today ... East winds 15 knots seas 4 feet.

**Issued 1615Z Friday 2/9/2001 (0615 HST Friday 2/9/2001)**

Caution is advised for gusty trade winds.

Caution is advised for waters around Kauai and waters south of islands from Kauai to Maui due to strong gusty winds associated with isolated thunderstorms.

Today .. East winds to 20 knots seas to 8 feet. Scattered showers and isolated thunderstorms.

Channels between the islands..

Today ... East winds 25 knots seas 12 feet.

**Issued 2200Z Friday 2/9/2001 (1200 HST Friday 2/9/2001)**

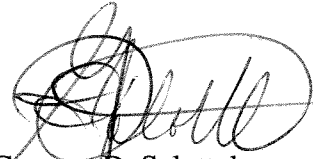

Caution is advised for gusty east and southeast winds.

This afternoon... East and southeast winds to 20 knots seas to 8 feet. Scattered showers.

Channels between the islands..

East winds 25 knots seas 12 feet.

Attachments 23 – 48 ... Marine Forecasts issued by National Weather Service Forecast Office in Honolulu, Hawaii.

HIGH SURF ADVISORY NUMBER 7  
NATIONAL WEATHER SERVICE HONOLULU HI  
830 PM HST WED FEB 7 2001

...A HIGH SURF ADVISORY IS IN EFFECT FOR THE NORTH AND EAST SHORES  
OF ALL HAWAIIAN ISLANDS...

A LOW ABOUT 350 MILES NORTH NORTHWEST OF HONOLULU CONTINUES TO SEND  
NORTH TO NORTHEAST SWELLS TOWARD THE ISLANDS. SURF TO 6 FEET IS  
EXPECTED ALONG EAST FACING SHORES AND SHOULD BEGIN TO SLOWLY SUBSIDE  
OVERNIGHT... AFTER HIGH TIDE.

IN ADDITION... A NORTHWEST SWELL IS PRODUCING SURF OF 8 TO 12 FEET  
WITH OCCASIONAL HIGHER SETS FOR THE NORTH SHORES OF ALL ISLANDS.  
THIS SWELL IS EXPECTED TO CONTINUE THRU MOST OF THURSDAY.

HIGH SURF IS DANGEROUS SURF. BEACHGOERS ARE THEREFORE URGED TO BE  
CAUTIOUS.

THE NEXT SCHEDULED ADVISORY WILL BE AT 830 AM THURSDAY OR SOONER IF  
NEEDED.

OLSON NATIONAL WEATHER SERVICE HONOLULU
